

# READJUSTMENT OF LATERALLY ADJACENT DOOR LEAVES

# Problem: Opened sash rests on the side

**Secure the opened sash by  
attaching a clamp in front of the  
roller**

**Support the opened gate wing with a suitable assembly support. Use a suitable support to avoid damage to the paintwork**

# Supported gate wing

**Loosening the nut M10, spanner  
size 19 and 22 is required**

# Remove screw with bearing bush

**Pull the lever tube in the direction  
of the opposite door frame**

1. Refit bolt, bearing bush and nut
2. Tighten the screw connection firmly, rotation between the gate wing and the tube of the lever arm must not be hindered
3. Remove support

4. Check the distance between the door leaf and the fixed upright frame
5. Repeat the process if necessary until the desired distance is reached
